4 Epi 204: Generalized linear models

Generalized linear models have three components:

1. The **outcome distribution** family: $\text{p}(Y|\mu(\tilde{x}))$
2. The **link function**: $g(\mu(\tilde{x})) = \eta(\tilde{x})$
3. The **linear component**: $\eta(\tilde{x}) = \tilde{x} \cdot \beta$

$$\left[\pi \stackrel{\text{def}}{=} \Pr(Y=1|\tilde{X}=\tilde{x})\right] \overbrace{\underbrace{\underset{\frac{\omega}{1+\omega}}{\overset{\frac{\pi}{1-\pi}}{\rightleftarrows}} \left[\omega \stackrel{\text{def}}{=} \text{odds}(Y=1|\tilde{X}=\tilde{x})\right] \underset{\exp\{\eta\}}{\overset{\log\{\omega\}}{\rightleftarrows}}}_{\text{expit}(\eta)}}^{\text{logit}(\pi)} \left[\eta(\tilde{x}) \stackrel{\text{def}}{=} \text{log-odds}(Y=1|\tilde{X}=\tilde{x})\right]$$
